

## Supplementary Online Content

Okubo M, Schmicker RH, Wallace DJ, et al; for the Resuscitation Outcomes Consortium Investigators. Variation in survival after out-of-hospital cardiac arrest between emergency medical services agencies. *JAMA Cardiol.* Published online September 26, 2018. doi:10.1001/jamacardio.2018.3037

**eFigure 1.** Multivariable Hierarchical Model with Patient- and EMS Agency-level Covariates

**eFigure 2.** Assignment of the Primary EMS Agency under Multiple Agencies Involvement

**eFigure 3.** Variation in Adjusted Rate of Survival to Hospital Discharge with 95% CI between EMS Agencies

**eTable 1.** Patient, Cardiac Arrest Event, Layperson and EMS Interventions, Post-resuscitation Management, and EMS Agency Characteristics among Those who Survived >60 minutes after Hospital Arrival, Stratified by Quartiles of Survival at EMS agency

**eTable 2.** Patient Demographics, Cardiac Arrest Event Characteristics, Layperson and EMS Interventions, EMS Agency Characteristics, and Outcome between Cases with and without Missing Variables

**eTable 3.** Coefficient in the Multivariable Hierarchical Model with Patient-level and EMS Agency-level Variables

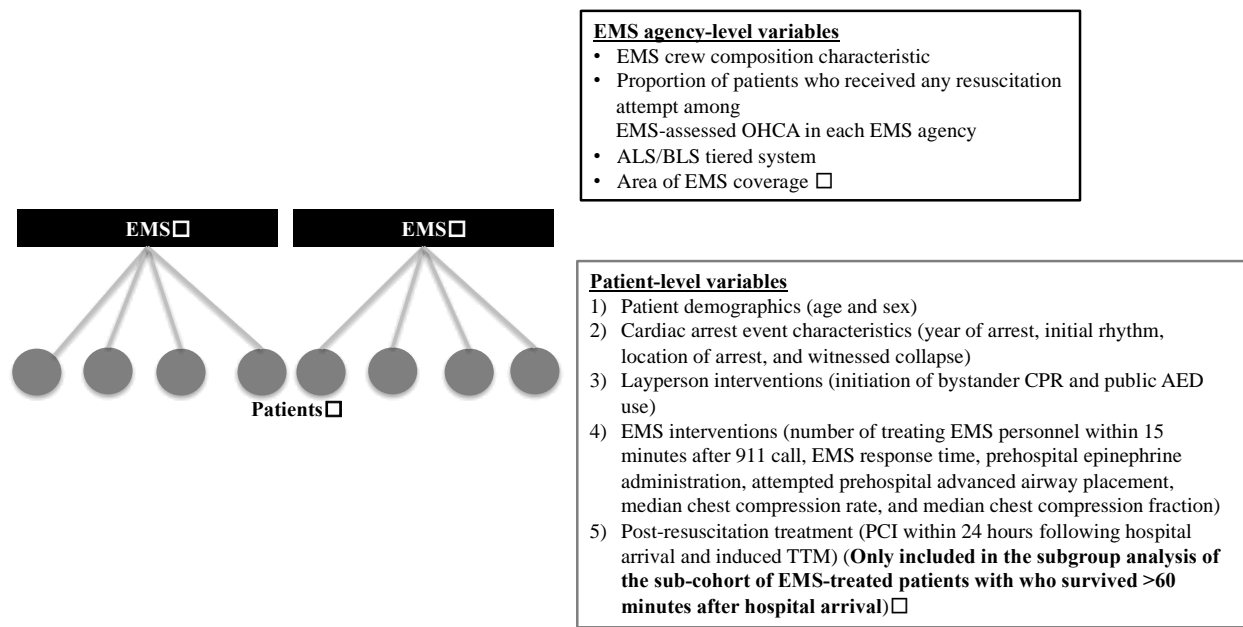

**eTable 4.** Variation in Survival and Functional outcomes between EMS Agencies, including Compression Depth

**eTable 5.** Variation in Survival and Functional Outcomes after EMS-treated Out-of-Hospital Cardiac Arrest between EMS Agencies, Primary agency=first arriving agency

**eTable 6.** Variation in Survival and Functional outcomes after EMS-treated Out-of-Hospital Cardiac Arrest between EMS Agencies, Primary agency=highest level agency

This supplementary material has been provided by the authors to give readers additional information about their work.

## Supplemental Figure 1

**eFigure 1. Multivariable Hierarchical Model with Patient- and EMS Agency-level Covariates**

EMS indicates emergency medical services; OHCA, out-of-hospital cardiac arrest; ALS, advanced life support; BLS, basic life support; CPR, cardiopulmonary resuscitation; AED, automated external defibrillator; PCI, percutaneous coronary intervention; TTM, targeted temperature management.

Supplemental Figure 2

(A) Primary EMS agency = ALS agency

(B) Primary EMS agency = ALS agency

(C) Primary EMS agency = BLS agency

**eFigure 2. Assignment of the Primary EMS Agency under Multiple Agencies Involvement**

(A) the ALS agency was the primary agency if the ALS agency arrived at the scene earlier than the BLS agency, (B) the ALS agency was the primary agency if the BLS agency arrived at the scene earlier than ALS agency but an ALS intervention(s) was provided within 6 minutes of BLS agency arrival, and (C) the BLS agency was the primary agency if the BLS agency arrived at the scene earlier than the ALS agency and no ALS intervention was provided within 6 minutes from BLS agency arrival. We defined ALS interventions as the delivery of an advanced airway (endotracheal tube or supraglottic airway), manual defibrillation, or intravenous drug therapy. EMS indicates emergency medical services; ALS, advanced life support; and BLS, basic life support.

## Supplemental Figure 3

**eFigure 3. Variation in Adjusted Rate of Survival to Hospital Discharge with 95% CI between EMS Agencies<sup>a</sup>**

<sup>a</sup> Adjusted for patient demographics, cardiac arrest event characteristics, layperson interventions, EMS interventions, and EMS agency-level variables.

EMS indicates emergency medical services; and CI, confidence interval.

**eTable 1. Patient, Cardiac Arrest Event, Layperson and EMS Interventions, Post-resuscitation Management, and EMS Agency Characteristics among Those who Survived >60 minutes after Hospital Arrival, Stratified by Quartiles of Survival at EMS agency**

Abbreviation; OHCA, out-of-hospital cardiac arrest; EMS, emergency medical services; CI, confidence interval; CPR, cardiopulmonary resuscitation; AED, automated external defibrillator; BLS, basic life support; ALS, advanced life support

1. Patient age and sex

2. Year of arrest, initial rhythm, location of arrest, and witnessed collapse

3. Layperson CPR and public AED use

4. Number of treating EMS personnel within 15 minutes after 9-1-1 call, epinephrine administration, attempted advanced airway, chest compression fraction, chest compression rate, and chest compression depth

5. EMS crew composition characteristics, proportion of patients who received any resuscitation attempt among EMS-assessed OHCA, ALS/BLS tiered system, and area of EMS coverage.

**eTable 5. Variation in Survival and Functional Outcomes after EMS-treated Out-of-Hospital Cardiac Arrest between EMS Agencies,**  
**Primary agency=first arriving agency**
